How to Open Terminal on Windows 10

We'll walk through the steps to open the Terminal on your Windows 10 computer. This is helpful for running command-line applications, scripts, or even just tinkering around with system commands.

Step 1: Click the Start Menu

First, click on the Start menu button in the lower-left corner of your screen.

This is where all the magic begins. The Start menu is your gateway to all the applications and settings on your computer.

Step 2: Type "cmd" in the Search Bar

Next, type "cmd" into the search bar.

As you begin typing, you'll notice that Windows starts suggesting applications that match your search. "cmd" stands for Command Prompt, which is another name for the Terminal in Windows.

Step 3: Select "Command Prompt" from the Results

Once you see "Command Prompt" in the search results, click on it.

This will open the Terminal window, where you can start typing your commands. The Command Prompt should open almost instantly.

Step 4: Use the Power User Menu (Optional)

Alternatively, you can right-click the Start menu and choose "Windows PowerShell" or "Command Prompt."

This is a quicker method if you're comfortable with using the right-click menu. Windows PowerShell offers more advanced functionalities, but Command Prompt is just fine for basic commands.

Step 5: Create a Desktop Shortcut (Optional)

If you use the Terminal frequently, you might want to create a desktop shortcut for easier access.

Right-click on your desktop, select "New," and then "Shortcut." In the location field, type "cmd" and click "Next." Name your shortcut and click "Finish." Now you have a quick way to open the Terminal anytime you need it.

After completing these steps, you'll have your Terminal open and ready for action. You can start typing commands, running scripts, or doing anything else you need to do in the command-line interface.
